Medicare beneficiary and other payer financial liability

Chart 5-1. Sources of supplemental coverage among noninstitutionalized Medicare beneficiaries, 2001

Note: Beneficiaries are assigned to the supplemental coverage category that applied for the most time in 2001.

They could have had coverage in other categories throughout 2001. Other public sector includes federal and state programs not included in other categories. Analysis includes only beneficiaries living in the community.

- Most beneficiaries living in the community have coverage that supplements or replaces the Medicare benefit package. Ninety-one percent of beneficiaries have supplemental coverage or participate in Medicare managed care.
- Sixty-one percent have private-sector supplemental coverage such as Medigap (28 percent) or employer-sponsored retiree coverage (33 percent).
- Fourteen percent have public-sector supplemental coverage, primarily Medicaid.
- Sixteen percent participate in Medicare managed care. This includes Medicare+Choice (now Medicare Advantage), cost, and health care prepayment plans. These types of arrangements generally replace Medicare coverage and often add to it.

Chart 5-2. Sources of supplemental coverage among noninstitutionalized Medicare beneficiaries, by beneficiaries' characteristics, 2001

	Number of beneficiaries	Employer- sponsored insurance	Medigap insurance	Medicaid	Medicare managed care	Other public sector	Medicare only
All beneficiaries	38,508	32.6%	28.1%	12.2%	16.2%	2.1%	8.9%
Demographics							
Male	17,148	35.0	24.8	10.5	15.5	2.3	12.0
Female	21,360	30.8	30.8	13.5	16.7	1.9	6.4
< 65	5,304	27.9	5.8	35.2	8.2	3.9	19.0
65–69	9,228	38.8	24.2	8.6	17.3	1.7	9.5
70–74	8,439	32.7	32.0	7.5	18.3	2.0	7.4
75–79	7,182	32.6	34.8	8.8	16.8	1.5	5.6
80–84	4,808	30.7	36.2	8.4	17.8	1.7	5.2
85+	3,547	26.5	38.1	9.9	16.4	2.0	7.2
Income status							
Below poverty	5,911	9.3	15.2	51.7	10.7	2.3	10.8
100-125% of poverty	3,966	19.2	23.1	22.7	15.4	2.7	16.8
125–200% of poverty	7,773	29.0	31.1	6.6	18.8	2.8	11.6
200–400% of poverty	11,570	40.4	30.1	1.2	19.2	1.5	7.5
Over 400% of poverty	9,175	46.9	33.8	0.3	13.8	1.7	3.5
Eligibility status							
Aged	33,086	33.4	31.7	8.4	17.4	1.8	7.3
Disabled	5,111	27.2	5.8	35.1	8.5	4.0	19.4
ESRD	311	39.1	10.7	37.2	6.3	1.0	5.8
Residence							
Urban	29,315	34.3	24.4	11.6	20.3	1.9	7.5
Rural	9,168	27.1	40.1	14.0	3.0	2.6	13.3
Health status							
Excellent/very good	15,591	35.3	32.1	5.7	17.9	1.5	7.4
Good/fair	19,235	31.4	26.8	14.6	15.7	2.3	9.1
Poor	3,521	28.0	17.0	27.5	10.6	3.5	13.4

Note: ESRD (end-stage renal disease). Beneficiaries are assigned to the supplemental coverage that applied for the most time in 2001. They could have had coverage in other categories throughout 2001. Medicare managed care includes Medicare+Choice (now Medicare Advantage), cost, and health care prepayment plans. Other public sector includes federal and state programs not included in other categories. In 2001, poverty was defined as \$8,494 for people living alone and as \$10,715 for married couples. Urban indicates beneficiaries living in metropolitan statistical areas (MSAs). Rural indicates beneficiaries living outside MSAs. Analysis includes only beneficiaries living in the community.

- Employer-sponsored supplemental coverage is most common among those who are age 65 to 79, high income (above 200 percent of poverty), eligible due to age or ESRD, urban dwelling, and male, and who report excellent or very good health.
- Medigap is most common among those who are "old" aged (age 80 or older), middle or high income (above 125 percent of poverty), eligible due to age, rural dwelling, female, and who report excellent or very good health.
- Medicaid coverage is most common among those who are under 65, low income (below 125 percent of poverty), eligible due to disability or ESRD, rural dwelling, and female, and who report poor health.
- Medicare managed care is most common among those who are age 65 or older, middle income (between 125 and 400 percent of poverty), eligible due to age, urban dwelling, female, and who report excellent or very good health.
- Lack of supplemental coverage (Medicare coverage only) is most common among beneficiaries who are under age 65, with income between 100 and 125 percent of poverty, eligible due to disability, rural dwelling, male, and who report poor health.

Chart 5-3. Total spending on health care services for noninstitutionalized FFS Medicare beneficiaries, by source of payment, 2001

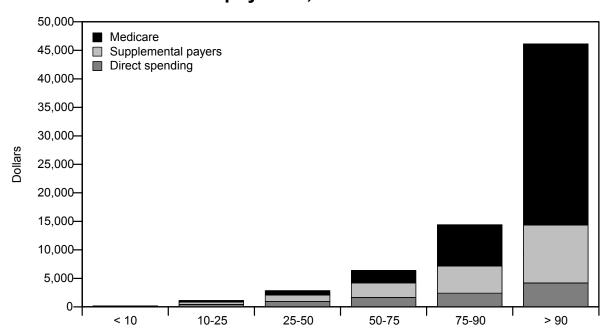

Per capita total spending = \$9,274

Note: FFS (fee-for-service). Private supplements include employer-sponsored plans and individually–purchased coverage. Public supplements include Medicaid, Department of Veterans Affairs, and other public coverage. Direct spending is on Medicare cost sharing and noncovered services but not supplemental premiums. Analysis includes only FFS beneficiaries living in the community.

- Among fee-for-service (FFS) beneficiaries living in the community, the total cost of health care services (defined as beneficiaries' out-of-pocket spending as well as expenditures by Medicare, other public-sector sources, and all private-sector sources on all health care goods and services) averages \$9,274. Medicare is the largest source of payment; it pays 55 percent of the health care costs for FFS beneficiaries living in the community, or an average of \$5,058 per beneficiary.
- Private sources of supplemental coverage—primarily employer-sponsored retiree coverage and Medigap—pay 20 percent of beneficiaries' costs, or an average of \$1,837 per beneficiary.
- Beneficiaries pay 16 percent of their health care costs out of pocket, with an average of \$1,503 of spending per beneficiary.
- Public sources of supplemental coverage—primarily Medicaid—pay 9 percent of beneficiaries' health care costs, or an average of \$876 per beneficiary.

Chart 5-4. Per capita total spending on health care services among noninstitutionalized FFS beneficiaries, by source of payment, 2001

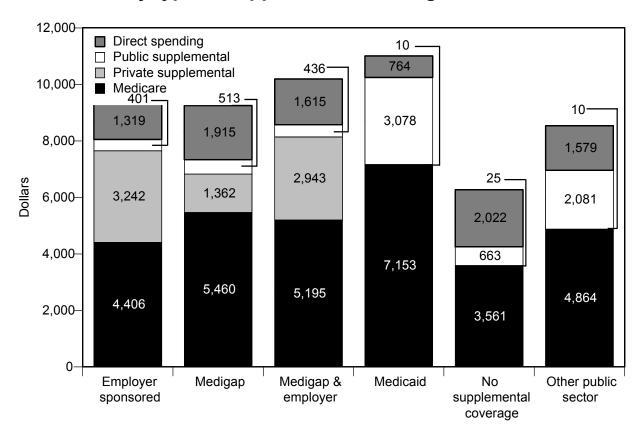

Groups of beneficiaries ranked by total spending (percentile ranges)

Note: FFS (fee-for-service). Analysis includes only FFS beneficiaries living in the community in 2001. Direct spending is on Medicare cost sharing and noncovered services but not supplemental premiums. Totals may not sum to 100 due to rounding.

- Total spending on health care services varies dramatically across fee-for-service (FFS)
  beneficiaries living in the community. Spending for the 10 percent of beneficiaries with the
  highest total spending averages \$46,100. Spending for the 10 percent of beneficiaries with
  the lowest total spending averages \$170.
- Among FFS beneficiaries living in the community, Medicare pays a larger percentage as
  total spending increases, and beneficiaries' direct spending is a smaller percentage as total
  spending increases. For example, Medicare pays 55 percent of total spending for all
  beneficiaries, but 69 percent of total spending for the 10 percent of beneficiaries with the
  highest total spending. Beneficiaries' direct spending covers 16 percent of total spending for
  all beneficiaries, but only 9 percent of total spending for the 10 percent of beneficiaries with
  highest total spending.

Chart 5-5. Variation in and composition of total spending among noninstitutionalized FFS beneficiaries, by type of supplemental coverage, 2001

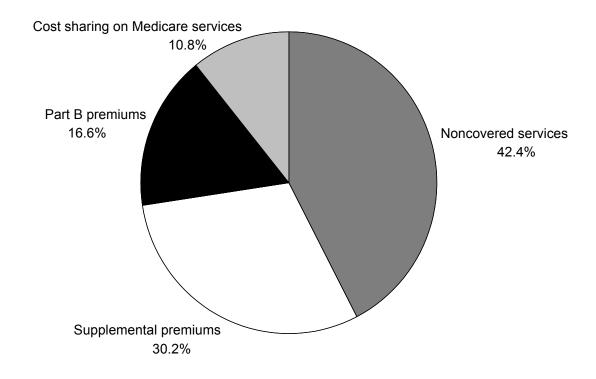

Note: FFS (fee-for-service). Beneficiaries are assigned to the supplemental coverage category that applied for the most time in 2001. They could have had coverage in other categories throughout 2001. Other public sector includes federal and state programs not included in the other categories. Private supplements include employer-sponsored plans and individually-purchased coverage. Public supplements include Medicaid, Department of Veterans Affairs, and other public coverage. Analysis includes only FFS beneficiaries living in the community. Direct spending is on Medicare cost sharing and noncovered services but not supplemental premiums.

- The level of total spending (defined as beneficiaries' out-of-pocket spending as well as expenditures by Medicare, other public-sector sources, and all private-sector sources on all health care goods and services) among fee-for-service beneficiaries living in the community varies by the type of supplemental coverage they have. Total spending is much lower for those beneficiaries with no supplemental coverage than for those beneficiaries who have supplemental coverage. Beneficiaries with Medicaid coverage have the highest level of total spending, nearly twice as high as for those with no supplemental coverage.
- Medicare is the largest source of payment for beneficiaries in each supplemental insurance category, but the second largest source of payment differs. Among those with employersponsored or public supplemental coverage (Medicaid and other public), supplemental coverage is the second largest source of payment. However, among those with Medigap (and no employer-sponsored coverage) and those with Medicare only, beneficiaries' direct spending is the second largest source of payment.

Types of out-of-pocket spending among Chart 5-6. noninstitutionalized FFS beneficiaries, 2001

Per capita out-of-pocket spending = \$2,824

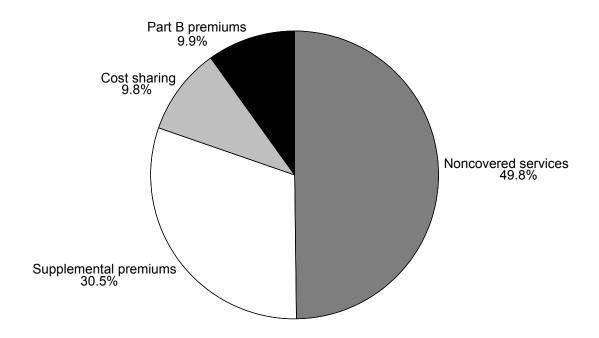

FFS (fee-for-service). Analysis includes only FFS beneficiaries living in the community. Totals may not Note:

sum to 100 due to rounding.

- Many beneficiaries have substantial health care liabilities that Medicare does not cover. Medicare has cost sharing on services it covers, and in the year represented by the data (2001), Medicare did not cover services such as most outpatient prescription drugs and dental care. Beginning in 2006, Medicare will have a voluntary prescription drug program.
- The cost sharing and noncovered services must be paid out of pocket by beneficiaries or through supplemental coverage. Beneficiaries often pay out of pocket for some or all premiums for supplemental coverage. Moreover, they generally pay out of pocket for the Part B premium.
- Average per capita out-of-pocket spending in 2001 was \$2,824 for fee-for-service beneficiaries living in the community. Noncovered services made up the largest share—42 percent—of that amount in 2001. The share of out-of-pocket spending attributable to noncovered services will likely decline in 2006, when the voluntary drug program begins.

Chart 5-7. Sources of change in out-of-pocket spending among noninstitutionalized FFS beneficiaries, 1993–2001

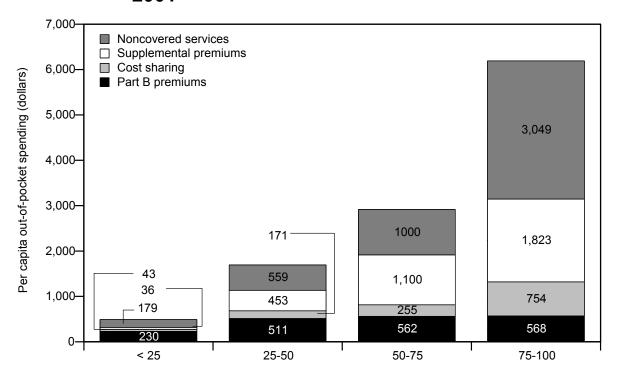

Note: FFS (fee-for-service). Analysis includes only FFS beneficiaries living in the community. Analysis does not adjust for inflation.

Source: MedPAC analysis of Medicare Current Beneficiary Survey, Cost and Use file, 2001

Some components of out-of-pocket spending have contributed much more than others to
overall increases in out-of-pocket spending. Among fee-for-service beneficiaries living in the
community, per capita out-of-pocket spending increased from \$1,784 in 1993 to \$2,824 in
2001, about 5.9 percent annually. Noncovered services, such as outpatient prescription
drugs, account for the largest share—50 percent—of the increase.

Chart 5-8. Out-of-pocket spending among noninstitutionalized FFS beneficiaries, by out-of-pocket spending level, 2001

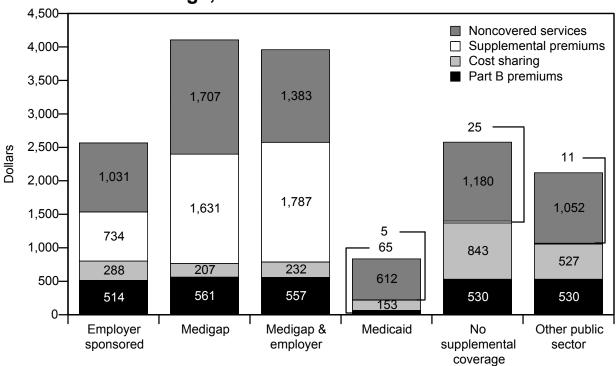

Groups of beneficiaries ranked by out-of-pocket spending (percentile ranges)

Note: FFS (fee-for-service). Sample of 9,703 includes only community-dwelling, FFS beneficiaries in 2001.

- The level of out-of-pocket spending varies widely among fee-for-service beneficiaries living
  in the community. The 25 percent of beneficiaries with the lowest out-of-pocket spending
  average \$500. The 25 percent of beneficiaries with the highest out-of-pocket spending
  average \$6,200.
- The composition of out-of-pocket spending changes as spending increases. Noncovered services and supplemental premiums tend to represent a larger share as out-of-pocket spending increases. Relative to the other categories, cost sharing maintains a more constant share as out-of-pocket spending increases. Finally, the Part B premium tends to represent a decreasing share as out-of-pocket spending increases, even though the magnitude of out-of-pocket spending on the Part B premium tends to increase. The relatively low level of out-of-pocket spending on the Part B premium in the lowest quartile (\$230) reflects, in part, the fact that beneficiaries eligible for Medicaid do not pay out of pocket for the Part B premium.

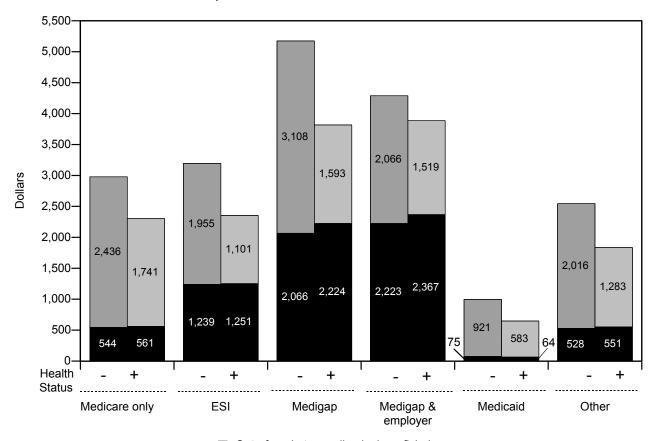

Chart 5-9. Out-of-pocket spending among noninstitutionalized FFS beneficiaries, by type of supplemental coverage, 2001

Note: FFS (fee-for-service). Beneficiaries are assigned to the supplemental coverage where they spent the most time in 2001. They could have had coverage in other categories throughout 2001. Other public sector includes federal and state programs not included in the other categories. Analysis includes only FFS beneficiaries living in the community.

- Out-of-pocket spending varies widely by a beneficiary's type of supplemental coverage. Beneficiaries with Medicaid coverage have the lowest average out-of-pocket spending, \$835. Beneficiaries with Medigap, or Medigap with employer-sponsored supplemental coverage, have the highest average out-of-pocket spending, about \$4,000.
- The composition of out-of-pocket spending differs by type of supplemental coverage. Supplemental premiums are relatively high for beneficiaries with Medigap coverage, reflecting the lack of subsidy for this type of coverage. In contrast, employers often subsidize the cost of retiree health insurance. Noncovered services are the largest component of out-of-pocket spending for beneficiaries with all categories of supplemental coverage except those who have both Medigap and employer-sponsored coverage, where supplemental premiums are the largest component.

Chart 5-10. Out-of-pocket spending for premiums and health services per beneficiary, by insurance and health status, 2001

Out-of-pocket spending by beneficiaries

Premiums paid by beneficiaries

- Beneficiaries who report they are in fair or poor health
- + Beneficiaries who report they are in good, very good, or excellent health

Note: ESI (employer-sponsored supplemental insurance).

- Insurance that supplements Medicare does not shield beneficiaries from all out-of-pocket costs.
   Beneficiaries who report being in fair or poor health spend more out of pocket for health services than those reporting good, very good, or excellent health, regardless of the type of coverage they have to supplement Medicare.
- What beneficiaries actually pay out of pocket varies by type of supplemental coverage. For
  those with Medigap, out-of-pocket spending generally reflects the premiums and costs of
  prescription drugs and other services not covered by Medicare. Beneficiaries with ESI
  usually pay less out of pocket for prescription drugs but may pay more in Medicare
  deductibles and cost sharing.
- Reductions in coverage and benefits offered under ESI plans, changes to Medicare benefits, and increases in premiums for all supplemental insurance since 2001, are not reflected in these data.
